

ENGINEER: CIMA (Sherbrooke)

GENERAL CONTRACTOR: Les Entreprises Allaire et Gince Inc.

OBJECTIVE: Create a barrier between the Agropur parking lot and neighbors' residences.

Agropur, Canada's largest dairy cooperative, is an innovative, world-class organization that is in tune with its customers' needs. Some of Agropur products include Natrel, Yoplait, Sealtest and many more. Visit their website for more information.

<http://www.agropur.com/en/>

Agropur's objective is to live in harmony with its residential neighbors. For this reason, they opted for a buffer space between the parking lot and the residences. In order to control the weeds, Biobarrier was installed over the sloped area and covered with stones.

Sound barrier wall 75 meters long. Parking lot on right and sloped section towards residential neighbors on left.

Earth and sand were used to fill the space between concrete wall and residences.

*Installing Biobarrier and covering with stones
3/4" – 1 1/4" to a thickness of 2" to 3".*

Plastic pegs are used to secure the Biobarrier in place during installation.

Stone surfacing covers Biobarrier entirely in order to keep it in place and to protect it from the sun's UV rays.

Completed project

Biobarrier's performance is guaranteed for 15 years, but expect this period to last 25 and perhaps 30 years.
