

Hydro Quebec - Vegetation Control inside a Capacitor Area

Eight years ago Hydro Quebec opted for Biobarrier to control vegetation inside one of their capacitor areas located in Shawinigan, Quebec. Over the years Hydro Quebec used the same Biobarrier application at many other locations across Quebec. Each project was surveyed regularly. The results have convinced Hydro Quebec that the guaranteed long term performance is working as expected. In view of these results, Hydro Quebec decided to use Biobarrier at their largest (70,000 sq. ft.) capacitor area located in Chateauguay, Quebec.

Installing the Biobarrier membrane

Covering the Biobarrier membrane with gravel

Project Complete!

Biobarrier's performance is guaranteed for 15 years, but expect this period to last 25 and perhaps 30 years.
