

## FLOWER BED

This is a small residential project located in Pincourt , Quebec. Biobarrier was used to control the weeds in a flower bed. Every summer, the homeowner spent many hours removing weeds. One day, he was listening to a radio show about home and garden maintenance and they were talking about the advantages of Biobarrier.

The homeowner thought that it was too bad that he had never heard of Biobarrier before, it would have saved him countless hours weeding his garden. So, he decided to install Biobarrier.

*Remove all weeds and level the soil with a slope away from the house.*

*Install the Biobarrier membrane. If you have trees or shrubs, Biobarrier fits all types of configurations. All you need to do is cut an opening and fit it around the tree or shrub. Using the supplied plastic pegs, secure the membrane in place.*

Continue the installation process by overlapping the membrane using a width of two nodules.

Put a minimum of 3" of mulch over the Biobarrier membrane.

The completed project.  
A garden that is and will continue to be free of weeds.

Biobarrier's performance is guaranteed for 15 years, but you can expect it to last for 25 and even 30 years!
