

BIOBARRIER®

FLOWER BED

The Municipality of St-Laurent is classified a “flower city” and its green space maintenance personnel take pride in this designation. Many of the flower beds are located near mature trees and their root system is quite invasive causing some maintenance concerns for the flowerbeds. Biobarrier came to the rescue. With one application of Biobarrier covered with 18” to 24” of soil, the root system will no longer be a concern.

Biobarrier’s performance is guaranteed for 15 years, but expect this period to last 25 and perhaps 30 years.
