

NATURAL GAS PRESSURE REDUCTION STATION Trois Rivières, Québec

Gaz Métro needed a long term solution for its natural gas pressure reduction stations. For safety, all stations are protected with a barbed wire fence. Within the fenced area, there are natural gas pressure reduction pipes and related equipment. The vegetation growth within and around these installations needs to be removed on a regular basis. Pesticides can no longer be used to kill vegetation growth.

Gaz Métro selected BIOBARRIER to resolve the problem!

Preparation - removal of existing debris

Installing the Biobarrier membrane.

Addition of 3" of crushed stone and that's it!

Biobarrier's performance is guaranteed for 15 years, but you can expect it to last for 25 and even 30 years!
