

BIOBARRIER®

ROOT CONTROL

The City of Laval was having problems controlling tree roots that were damaging the cyclist Green Route.

After consideration and research, they opted for BIOBARRIER which was placed in a one meter deep trench.

For the next 25 to 30 years, cyclists and pedestrians will not have to be concerned with an uneven path.

Biobarrier's performance is guaranteed by the manufacturer for **15** years, but you can expect it to last for **25** and even **30** years!
