

BIOBARRIER®

**PHRAGMITE CONTROL**

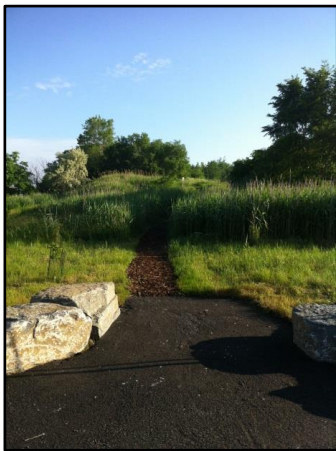

PROJECT: Jean Milot Park  
Montreal, QC

CONTRACTOR: Construction Edelweiss  
Saint Colombar, QC

Jean Milot Park is located at the corner of Langelier and Bélanger Streets in Montreal. The city wanted to rejuvenate the park with plants and shrubs and eliminate the invasion of phragmites.

The city opted for Biobarrier as it is the only root and weed control product that is guaranteed. To control the phragmites, Biobarrier was installed on all park paths.

The Biobarrier membrane comes in rolls and is simple to install. You just roll it out and cover with at least 3” of decorative stone, earth, mulch or crushed stone. This project used compacted crushed stone.

Biobarrier’s performance is guaranteed by the manufacturer for **15** years, but you can expect it to last for **25** and even **30** years!
