

The Municipality of Kirkland, QC has, for many years, been experiencing problems with managing the weeds located in street medians and curbs. After a thorough study of numerous products, they opted for Biobarrier. The main decision factor was the 15-year performance guarantee. It is the only known product worldwide that offers a performance guarantee.

Weeds were taking control of the median.

A geotextile was originally put in place to control the weeds. As you can see, it did not work!

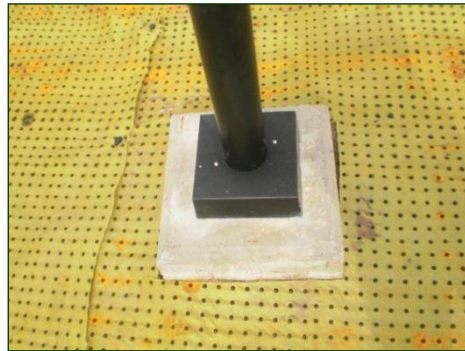

Complete clean up of the median, including the removal of the old geotextile.

Placing the Biobarrier membrane. Plastic pegs (which are included) secure the membrane in place.

Biobarrier will conform to round or square forms.

Overview of Biobarrier installation.

Decorative stones were returned to cover the membrane.

Biobarrier's performance is guaranteed by the manufacturer for 15 years, but you can expect it to last for 25 and even 30 years!
