

BIOBARRIER®

## ROOF SURFACE

15 years ago, on a roof of a high rise building located in downtown Montreal a metal grid was set in place for heating purposes. Typar Biobarrier membrane was set in place in certain sections in order to control vegetation growth. Patio slabs were placed over top.

In the areas where Typar Biobarrier was not installed, vegetation started growing. For this reason, the building owner decided to have Typar Biobarrier membrane installed over the entire surface to control the vegetation growth.
