

In the municipality of Vaudreuil-Dorion located on Mineault crescent are large Maple Silver trees. The root system of these trees has always been a nuisance for the nearby flower plantations. In order to control the roots, it was decided to install Typar Biobarrier. A trench was dug and the Biobarrier membrane was installed vertically to prevent the roots from invading the flower plantation.

Trifluralin which is the herbicide controlling agent of the Typar Biobarrier is non-systemic and is homologated by PMRA (Pest Management Regulatory Agency) for commercial and domestic application.

Typar Biobarrier has been sold for 40 years in the USA and 10 years in Canada.

For additional information, please visit our web site www.dbbinc.ca where you will also see more than 40 different Typar Biobarrier applications.

Biobarrier's performance is guaranteed by the manufacturer for 15 years, but you can expect it to last for 25 and even 30 years!
