

TYPAR BIOBARRIER (tree root control)

Tree roots are attracted to the water and waste in your septic tank and pipes. Therefore, they can infiltrate the septic system through cracks in the concrete or compromised joints in the pipes. This can lead to clogs and blockages that manifest as back-ups and overflows.

The long term solution is Typar Biobarrier. The manufacturer Berry Global offers a 15 year performance guarantee but in many situations this performance remains active for 25 to 30 years.

The installation is very simple. The Typar Biobarrier membrane is set in place on the perimeter of the septic tank. This will prevent any root intrusion in the septic tank.

For additional information please visit our web site www.dbbinc.ca

Biobarrier's performance is guaranteed by the manufacturer for 15 years, but you can expect it to last for 25 and even 30 years!
