

SEPTIC SYSTEM

TYPAR BIOBARRIER (tree root control)

This homeowner located in Quebec had major tree root invasion problems with his septic tank system. Most intersections with pipe joints had to be cut open in order to remove the tree roots and were replaced with neoprene connection using metal strapping to secure tightly the membrane onto the pipe. Typar Biobarrier was set in place and secured with plastic tie wraps. Tree roots will be prevented from invading the septic system for many years to come.

For additional information please visit our web site www.dbbinc.ca

Biobarrier's performance is guaranteed by the manufacturer for 15 years, but you can expect it to last for 25 and even 30 years!
