

BIOBARRIER®

## CONTROLLING WEEDS UNDER A LARGE SPRUCE TREE

The larger a tree gets, the larger the area under the tree that grass will not grow. Unfortunately, weeds will grow and overtake the area.

The homeowner opted for **Biobarrier**, the only guaranteed solution to control and eliminate weeds!

*Affected area under the tree.*

*The Biobarrier membrane is trimmed to the desired configuration and placed around the tree. Plastic pegs (supplied with every roll) are used to secure the membrane in place.*

3" thickness of mulch was placed over the Biobarrier membrane.  
Stone or soil can also be used.

Beautiful with the coloured mulch covering, **and best of all, no more weeds!**

Biobarrier's performance is guaranteed by the manufacturer for 15 years, but you can expect it to last for 25 and even 30 years!
