

## GRASSPROTECTA

During a major film production, the weight and handling of the equipment was causing damage to the grass. As the areas were also uneven, it made it difficult to operate, maneuver and secure the equipment properly.

The solution was to install **GrassProtecta** grass reinforcement mesh!

*What is GrassProtecta® Grass Reinforcement Mesh?*

GrassProtecta is a heavy duty thick plastic mesh that is installed directly onto existing grass surfaces to reinforce, protect and stabilize.

Additional information regarding GrassProtecta can be found on our [website](#).

*All TYPAR grass and ground reinforcement products are suitable for use as a source control solutions in LID and NPDES applications.*
