

GRASSPROTECTA

ADD A PARKING SPACE AND SAVE A TREE! Ottawa, ON

A homeowner from the Ottawa region wanted to add a parking space to their driveway which would have entailed digging and laying asphalt. This would have had a negative impact on a tree that was close to the driveway. The solution was Typar Grass Protecta.

The Grass Protecta mat was simply unrolled over the grass surface and secured in place using metal U-Pins (as recommended by the manufacturer). It took only a few weeks for the grass to grow through and cover the Grass Protecta.

Rain water simply filters through the reinforcement mat and into the soil.

The cost of this installation was more economical than getting that portion of the driveway paved and in the long term is environmentally friendly.

Additional information regarding GrassProtecta can be found on our [website](#).

All TYPAR grass and ground reinforcement products are suitable for use as a source control solutions in LID and NPDES applications.
