

TURF PROTECTA

GRASS REINFORCEMENT

RIDLEY COLLEGE - ST CATHARINES, ON

The maintenance division of the college were experiencing problems with the grass not growing near the entrances of the college due to heavy traffic of people walking over the surface.

The ideal solution was Turf Protecta!

Turf Protecta protects the root system allowing a thick rich green carpet to grow in place.

Installation is extremely easy!

- 1) The surface was treated with light soil and grass seeds.
- 2) Turf Protecta (which comes in a roll) was set in place using small metal anchors.
- 3) The grass grew through the openings of the Turf Protecta making it practically invisible.
- 4) Once proper growth was achieved, the grass was then cut regularly to an optimal length of 2" to 3".

Turf Protecta will ensure continuous growth and protection of the grass root system for many years.

Turf Protecta with anchors

Barely visible as the grass grows through it

RESULT: LUSH GREEN GRASS

For projects requiring stronger reinforcement for heavier circulation, please contact us.
We have a wide variety of products to service your requirements.

All TYPAR grass and ground reinforcement products are suitable for use as a source control solutions in LID and NPDES applications.
