

GRASSPROTECTA

PEDESTRIAN AREA

Mascouche, QC

GrassProtecta is a heavy duty thick polyethylene mesh for reinforcing grassed surfaces prone to wear, rutting and smearing. The oscillated mesh structure has been designed to increase traction and improve slip resistance by up to 97% compared to standard straight oriented meshes.

Project executed by:

Philippe Daignault of Monsterra Excavation Inc.

In front of this commercial building located in Mascouche, Quebec an area of the landscaping was set aside to create a safe walking area for pedestrians. Where the flat area was located, sod was placed on the surface. GrassProtecta was then placed over top. Over time, the grass will grow through the openings of the GrassProtecta offering a nice green surface and a safe place for pedestrians to walk.

Additional information regarding GrassProtecta can be found on our [website](#).

All TYPAR grass and ground reinforcement products are suitable for use as a source control solutions in LID and NPDES applications.
